

Proxima Software releases FontExpert 2020 Version 17.0 Font Manager for Windows

FontExpert 2020 version 17.0 is new major version incorporating improvements, new features, and fixes.

February 24, 2020 - Proxima Software today has announced the release of FontExpert 2020 version 17.0 font manager for Windows.

This release incorporates many new enhancements including:

- Text output with ligatures in the Main view, Text Sample view, and Waterfall view.
- Ligatures, Kerning, view Options buttons on toolbars in views.
- Copy, move Library and database to a custom folder;
- Attach Library and database from the custom folder.
- The default location of Library is now the application data root folder defined in options.
- Backup now supports more than 65536 files and folders within backup ZIP.
- Waterfall view: text output at small sizes (10pt, 12pt) and text clipping has been enhanced; added options to change sample text.
- Activation buttons (install, activate temporarily, uninstall) has been moved to the center of the main toolbar for easier access.
- The default shortcuts has been defined for Add to Groups... and Add to library... commands (Ctrl+G, Ctrl+L).
- Fixed: Occasional crashes after updating group states.
- Fixed: option for the item color in the Main view changed the color of the information text.
- Other fixes and enhancements.

The complete list and description of new features can be found in the release notes for the product, found on the company's website, proximasoftware.com/fontexpert/
